LIST OF SYMBOLS

STERILE EO	Sterilised using ethylene oxide
NON STERILE	Non-sterile
	Do not reuse Single use
	Do not use if packaging is damaged
CE	European conformity marking
CE 1639	CE certification issued by the notified body with accreditation ID 1639 (SGS - *Belgium*) for marking under Directive 93/42/EEC
	Distributed product
	Refer to the instructions for use
	1st level of packaging (pieces, simple packaging, peelpack)
	2nd level of packaging (box)
	3rd level of packaging (carton)

APPLIMED SA

ABOUT THE COMPANY

The Applimed SA Group, **manufacturer of sterile and non-sterile single-use medical devices**, is known primarily as one of the largest manufacturers of medical applicators in Europe.

We are certified EN ISO 13485:2016 and our medical devices carry the CE 1639 marking under Annex V of the Medical Devices Directive 93/42/EEC for sterility (class I-s) and under Annex II, section 4 for medical devices in class IIa. Applimed SA's main customers include distributors of medical devices, hospitals and clinics, care/nursing homes for elderly, private medical practices, home care services, and pharmacies.

Our know-how, experience and flexibility are all assets that make our company a leader in its field. We can offer you a wide variety of single-use medical devices and various associated services such as ethylene oxide sterilisation assured by the C.S.S.R (Centre de Stérilisation de Suisse Romande), certified EN ISO 13485.

Applimed SA makes a major contribution to the comfort and safety of patients and healthcare professionals through its work on producing and bringing to the market single-use medical devices which are perfectly suited to the needs of the medical sector.

HISTORY

1980
Dansu A/S founded in Denmark by Dr A. Danechi for the manufacture of medical applicators

1987
Opening of a second modern production site in Châtel-St-Denis (the group's HQ), with an increase in the range of single-use sterile products

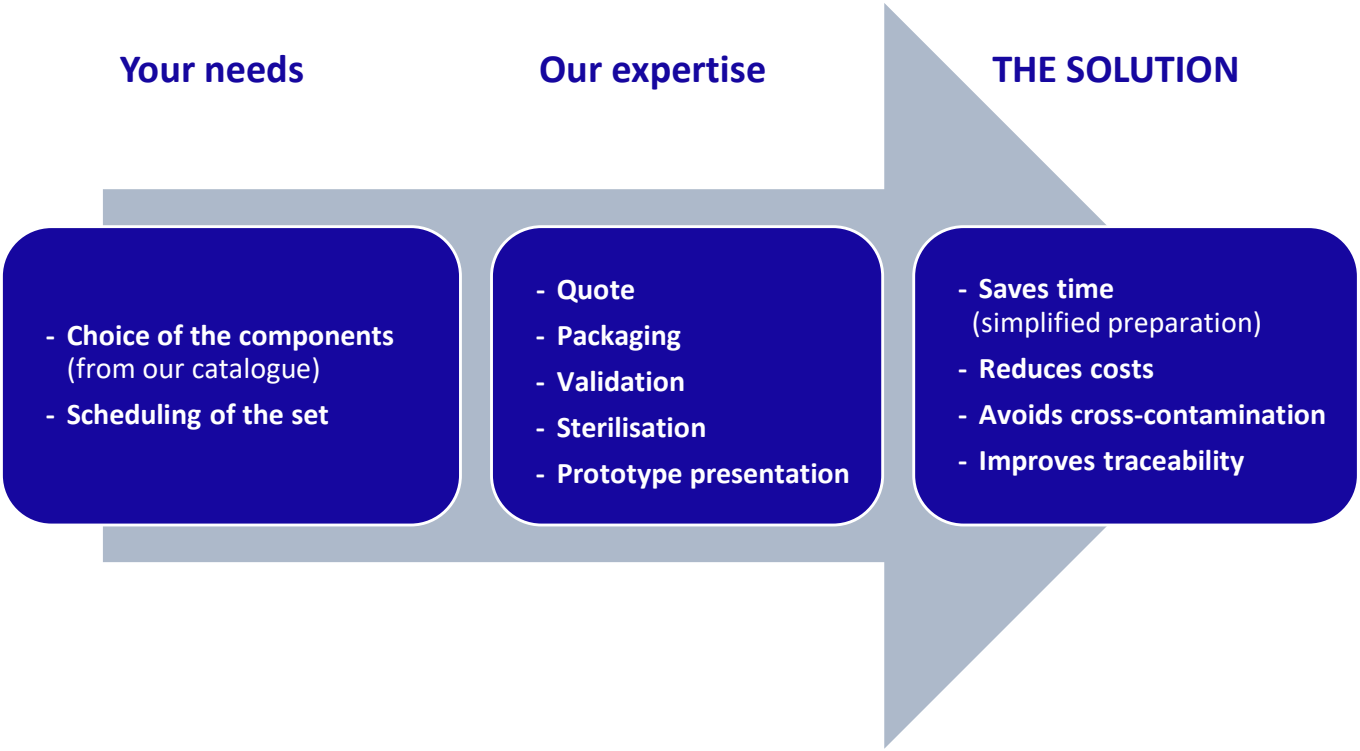
1999
Construction of C.S.S.R, an ethylene oxide sterilisation centre for industry operating to standard EN ISO 11135, with a capacity of 10,000 pallets per year

2008
Construction of a new warehouse with a surface of 1,200m2 (capacity of 2,000 pallets)

APPLIMED SA

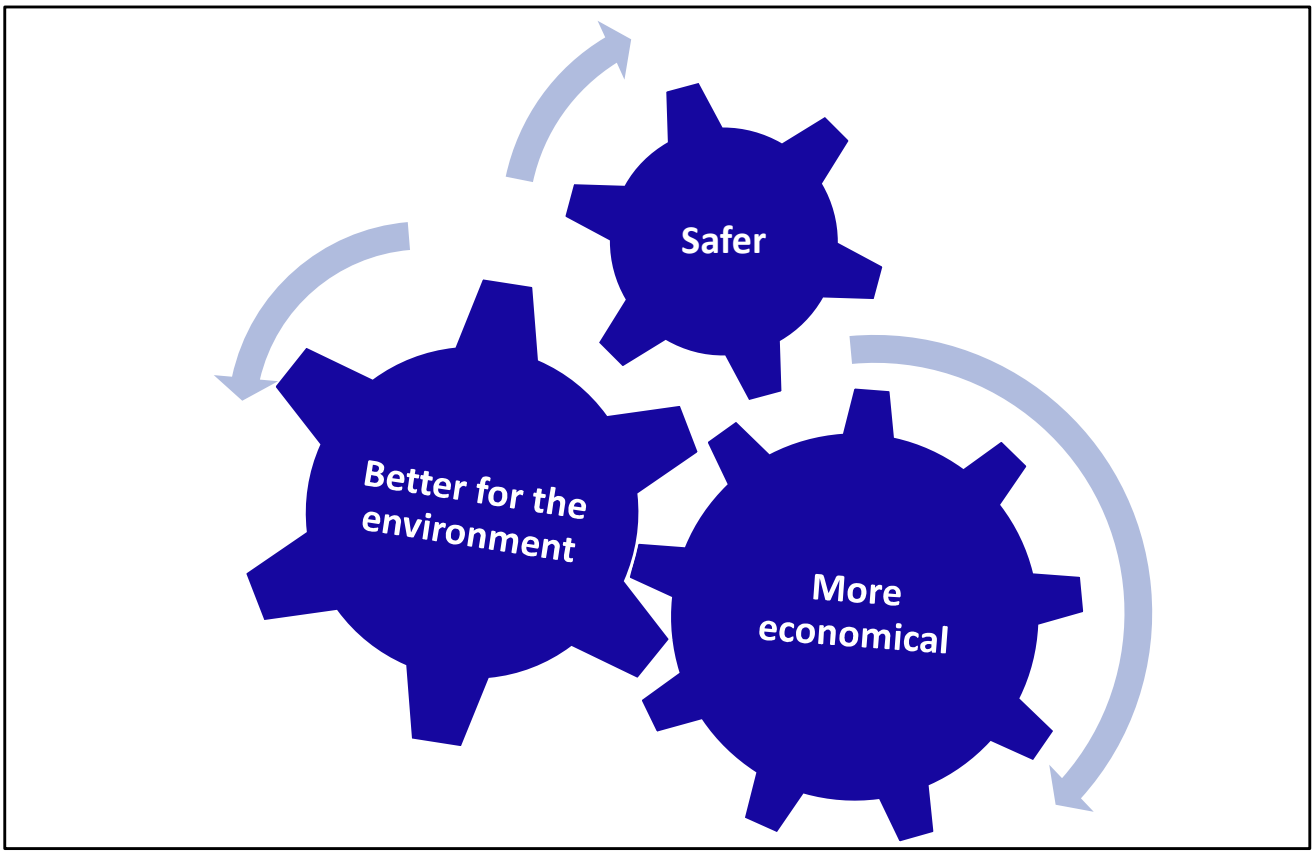
«TAILOR-MADE» SET

Applimed SA, with its extensive medical knowledge, manages the entire process of creating your single use custom set from start to finish, ensuring that the final product satisfies all of your needs in terms of quality of care, safety and management constraints.



Our specialists are available to provide any information you require or to discuss any project you may wish to develop.
The development and production of tailor-made sets are subject to minimum quantities.

THE ADVANTAGES OF SINGLE USE



- Single use is a safer option because cross-contamination is avoided.
- Single use eliminates the problem of cleaning reusable equipment and reduces costs associated with logistics (is saves space), execution (it saves considerable time), maintenance and investment.
- Choosing single-use products reduces the carbon footprint by saving thousands of litres of water and detergents. Since we are concerned about the impact on the environment, we provide our customers with a free service for the recovery and recycling of our metal instruments after use.

WASHING PROCESS OF METAL INSTRUMENTS

Client satisfaction and product quality remain our top priorities. This is the reason why we have implemented a washing process and invested in washer-disinfectors to ensure that our metal instruments meet our machining residues and microbiological contamination acceptance criteria.

Reception of raw materials

Positioning of the metal instruments on racks

Washing of the metal instruments in our washer-disinfector

Gathering of metal instruments for the packaging process

High-frequency surgery

Bipolar forceps are coagulation surgical instruments which :

- ✓ Minimise surgery trauma,
- ✓ Allow innovative solutions (no foreign body in the wound),
- ✓ Provide minimal and short interventions in the interests of patient's comfort,
- ✓ Reduce surgery costs.

APPLIMED SA

COLLECTION AND RECYCLING OF SINGLE-USE METAL INSTRUMENTS

Applimed SA can supply its customers with more than a hundred single-use metal instruments. Since we are concerned about the impact on the environment, we provide our customers with a free collection and recycling service for our discarded metal instruments (after use).

The process of collection and recycling is described below:

- Free supply of single-use 30-litre, 12-litre and 7-litre containers.
  (these are specially designed for medical care waste resulting from a medical activity according to UN/OMoD 180101/180102 standards which comply with federal oMoD directives).
- After use, the metal instruments for disposal are placed in the single-use container through a resealable cap. It is therefore no longer necessary to decontaminate them before placing them in the container.
- Once full *(do not exceed the load indicated on the container),* the container is hermetically sealed by the customer *(according to the instructions of use).*
- The company Rudosa collects the full containers which are hermetically sealed and exchanges them for new ones.
- Full containers are collected and then transported according to ADR/SDR standards in an approved facility for incineration and/or ecological recovery.
- This installation allows the containers to be introduced directly into the incinerator *(without opening them)* thus avoiding any risk of contamination.
- All plastic components and residues on the instruments are burned and the metal completely decontaminated by the incineration is recovered by a physical system *(courant de Foucault).*
- The metal instruments are then sent to a different Swiss company specialised in metal recycling. They are combined with other metals in order to be recycled for technical uses.

This service is completely free and no commercial transaction applies. The sole purpose of this service is to facilitate the disposal of metals.
